

## **Introduction**

At Tower Bridge, we are committed to ensuring progression and consistency in the teaching of the four operations  $( + - \div x)$ . This booklet shows the steps we take in school when teaching methods of calculation.

It is important to work through the steps at the suitable rate for every child. Without a good knowledge and understanding of numbers bonds and facts and an ability to use mental strategies, children will struggle when introduced to formal methods. Written methods are based on and not a replacement for mental methods.

No child should omit steps, children will move at different rates through some the steps.

## <u>Notes</u>

In class, children are encouraged to progress through the steps at their own rate. The aim is for all children to be using formal written methods for all four operations by year six.

We encourage flexibility in methods and children are encouraged to think "Can I work this out in my head?" and continue to look out for and recognise special cases.

If at any stage, a child is making a significant number of errors, they should return to the step they understand before moving on.

## Word Problems

When answering word problems children are encouraged to follow the following 'RUCSAC' steps;

- 1) Read the question
- 2) Understand underline the key information (in order to understand the question they might need to picture what is happening or draw what is happening).
- 3) Choose what calculation do they need? Does the problem have more than one step?
- 4) Solve Choose a method to solve the problem.
- 5) Answer Go back to the question. Have they actually solved what has been asked?
- 6) Check.

Addition	+
Use a wide variety of songs and rhymes, games and activities. Relate addition to combining two groups of objects, first by counting all and then by counting on from the largest number.	In practical activities and through discussion they will begin to use the vocabulary involved in addition.
They will find one more than a given number.	
Count on from any number	First using a number track 5 + 4 = 9
Count on from the largest number for numbers within 20, including 0.	'Put your finger on number five. Count on (count forwards) four.'
	Then onto a marked number line 8 + 7 = 15 'Put your finger on number eight and count on seven.' +1 $+1$ $+1$ $+1$ $+1$ $+1$ $+18$ $9$ $10$ $11$ $12$ $13$ $14$ $15$
Add a two-digit number and units	Start using a blank number line starting with the bigger number and jumping in ones, tens and then choosing suitable jumps.
Add two-digit number and tens Add two two-digit numbers	28 + 6 = 34 28 + 6 = 34
	28 + 30 = 58 28 + 30 = 58
	48 + 36 = 84 48 + 36 = 84
	If confident, use more efficient jumps
	+30 $+2$ $+4$ $$

Use partitioning to add two two-digit numbers	$43 + 25 = 68$ $/ \ / \ / \ /$ $40 \ 3 \ 20 \ 5$ $40 + 20 = 60$ $3 + 5 = 8$	
	60 + 8 = 68	
Add numbers up to three	First expanded	
column method	63 + 32 = 95	'Partition the numbers into tens and ones/units. Add units
	$\begin{array}{r} 60 + 3 \\ + \ 30 + 2 \\ 90 + 5 = 95 \end{array}$	together then add the tens together. Recombine to give the answer.'
	 Which will lead	Ilue to ensure understanding:         Inree add two equals rive. Write five in the units column.         60 add 30 equals 90. Write 9 (90) in the tens column.
	to	al cod
	The formal written me	
Introduce number where you bridge one hundred and	First expanded 68 + 24 = 92	
are required to carry.	$\begin{array}{r} 60 + 8 \\ + \ \underline{20 + 4} \\ 90 + 2 = 92 \\ 10 \end{array}$	'Partition the numbers into tens and ones/units. Add the units together, where the answer is 10 or greater 'carry' over to the tens column. Add the tens together remembering not to forget the ten underneath.
	Which will lead to the formal written method	<ul> <li>Sensure understanding:</li> <li>2 4</li> <li>Yeight add four equals 12. Write two in the units column and 'carry' one (10) across into the tens column. 60 add 20 and the ten that we 'carried' equals 90. Write 9 (90) in the tens column. 92 is the answer.</li> </ul>
Use the same method for different numbers. Three-digit numbers and two- digit numbers	546 + 67	
A pair of three-digit numbers	452 + 543	
Four-digit and five-digit numbers	63424 + 5384	
Decimal numbers	£34.12 + £8.19	

Subtraction	-
Use a wide variety of songs and rhymes, games and activities.	6-2=4 $5$ $5$ $5$ $5$ $5$
to <b>taking away</b> using objects to find out how many are left after some	Take two apples away. Now many are left:
Find one less than a number	
Count back from any number	First using a number track 9 - 5 = 4 "Place your finger on 9 and count back 5 spaces"
Solve missing number problems 20 = 15	Then progress onto a marked number line. 14 - 5 = 9
	9 10 11 12 13 14
	'Put your finger on number 14 and count back five.'
Subtract a two-digit number and units	Start using a blank number line starting with the bigger number and jumping <b>back</b> in units, tens and then choosing suitable jumps.
subtract two-digit number and tens	<b>34 - 6 = 28</b> -1 -1 -1 -1 -1
Subtract two two-digit numbers, using partitioning.	28 29 30 31 32 33 34 and in tens:
	$58 - 30 = 28$ $\begin{array}{r} -10 & -10 \\ 28 & 38 & 48 & 58 \end{array}$
	76 – 45 = 31
	-1  -1  -1  -1  -10  -10  -10
	31 32 33 34 35 <b>36 46 56 66 76</b>
If confident, use more efficient methods.	- 40
	-5 31 36 76

Subtract numbers up to	First using an expanded	l method
three digits using the written column method (where there is no exchange).	<b>78 – 23 = 55</b> 70 and 8 – <u>20 and 3</u> 50 and 5 = 55	'Partition numbers into tens and ones/units. Subtract the ones, and then subtract the tens. Recombine to give the answer.' <b>NB</b> In this example decomposition (exchange) is not required.
Exchange - this term is used instead of "borrow" or "pay back".	Which will lead to the f	ormal written method Use the language of place value to ensure understanding: 'Eight subtract three, seventy subtract twenty.'
Subtract numbers up to three digits using the written column method (where there is exchange).	Introduce exchange wit 73 – 27 = 46	th the expanded method at first
Exchange - this term is used instead of "borrow" or "pay back".	70 and 3 becomes - <u>20 and 7</u>	$\begin{array}{rrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrrr$
	Which will lead to the f	ormal written method
	$73 - 27 = 46$ $\begin{array}{r}       6 & 13 \\       7 & 3 \\       - & \frac{2}{4} & \frac{7}{6} \end{array}$	Use the language of place value to ensure understanding. 'We can't subtract seven from three, so we need to exchange a ten for ten ones to give us 60 + 13.'
Use the same method for different numbers. Three-digit numbers and two- digit numbers	538 - 67	
A pair of three-digit numbers	543 - 256	
Four-digit and five-digit numbers	63424 - 5827	
Decimal numbers	£24.52 - £8.23	

Multiplication	×
Use a wide variety of songs, rhymes and activities.	"Three apples for you and three apples for me. How many apples altogether?"
Use pictorial representations and arrays to solve one-step problems.	
Count in multiples of 2, 5 and 10.	'Six pairs of socks. How many socks altogether? 2, 4, 6, 8, 10, 12' Use arrays to help support early multiplication
Array - 4 x 2 = 8 Using dots or squares to show multiplication and	$2 \times 5 = 10 \text{ or } 5 \times 2 = 10$
division using rows and columns	Introduce x sign for "lots of" or "groups of"
Know that multiplication can be done in any order (commutative) e.g. 4x2=8 and 2x4=8 Recall and use 2,5 and 10	Using arrays 6 x 5 = 30 '5 + 5 + 5 + 5 + 5 = 30 ' ☆☆☆☆☆ '6 rows of 5' ☆☆☆☆☆ '6 groups of 5' ☆☆☆☆☆ '5 groups of 6'
times tables Know that multiplication is the same as repeated addition	$5 \times 6 = 30^{\circ}$ $4 \times 4 \times 4$ $6 \times 5 = 30^{\circ}$ $4 \times 4 \times 4$ Using pictures and diagrams '3 groups of 10 grayons'
Repeated addition 5 x 3 is the same as 5 + 5 + 5	'How many crayons altogether?' ' $10 + 10 + 10 = 30'$ ' $3$ groups of 10' '3 times ten' ' $3 \times 10 = 30'$ ' $10 \times 3 = 30'$
	Using an empty number line 6 x 5 = 30
	$ \begin{array}{cccccccccccccccccccccccccccccccccccc$

Only move on when confident with previous methods. Recall and use multiplication facts for the 3, 4 and 8 times tables Write and calculate multiplication including one-digit and two-digit numbers	Mental strategy using partitioning $13 \times 5 = 65$ (Partition 13 into 10 + 3) $10 \times 5 = 50$ $3 \times 5 = 15$ $50 + 15 = 65$ Use partitioning for the written grid method $\boxed{X \ 10 \ 3}$ $8 \ 80 \ 24$ $80 + 24 = 104$
Formal short multiplication TU x U HTU x U ThHTU x U	Firstly with two-digit number by a single digit1 3Starting with the units (3×8=24) Ensure the digit is 'carried over' and written under the line in the correct column. $\frac{X \ 8}{104}$ Then with a three-digit number and a single digit $1 \ 2 \ 7 \ \frac{X \ 6}{762}$ Then with a three-digit number and a single digit $1 \ 2 \ 7 \ \frac{X \ 6}{762}$
Multiplying by a multiple of ten Combine understanding to multiply TU X TU	Remind children about knowledge of place value and how when you multiply by 10 numbers move one place to the left.Use place value to multiply a number by a multiple of 1021 $21 \times 3 = 63$ $21 \times 30 = 630$ $X = \frac{3}{6} \frac{0}{3}$ $X = \frac{3}{6} \frac{0}{3}$ $X = \frac{3}{6} \frac{0}{3}$ Use brackets for early examples to help understanding. Encourage children not to use brackets in their own written work. $24$ $X = \frac{35}{720}$ $(24 \times 30)$ $\frac{120}{840}$
Use method for calculating HTU x TU and decimal numbers	Make sure children use knowledge of place value to align $5 \ 3 \cdot 2$ column and decimals correctly. $x \ 24 \cdot 0$ $2 \ 1^{12} \cdot 8$ $1 \ 0 \ 6 \ 4 \cdot 0$ $1 \ 2 \ 7 \ 6 \cdot 8$

Division	÷
Use a wide variety of songs, rhymes and activities. Begin to solve problems involving sharing and halving.	Share the apples between two people. "Half of the apple for you and half of the apples for me."
Use pictorial representations and arrays to solve one-step problems. Count in multiples of 2, 5 and 10.	'Share these eight apples equally between two children. How many apples will each child have?' Control Control
Array - 8 ÷ 2 = 4 Using dots or squares to show division and multiplication using rows and columns	'How many groups of 5?' '10 shared equally between 2 people' 'Half of ten is five'
Recall and use multiplication	Using arrays
2,5 and 10 times tables.	15 ÷ 5 = 3 15 ÷ 3 = 5 How many groups of 3?
Know the symbol for division	How many groups of 5? 15 shared between 3 people is? 15 shared between 5 people is? 15 divided by $5 = 3$
Know that division is the same as repeated	Using pictures and diagrams
Repeated addition 5 x 3 is the same as 5 + 5 + 5	<ul> <li>'30 crayons shared equally between three pots.' (Sharing)</li> <li>'We have 30 crayons and put ten crayons in each pot. How many pots do we need?' (Grouping)</li> <li>'30 divided by 10 = 3'</li> <li>'30 divided by 3 = 10'</li> </ul>
	30 ÷ 10 = 3 30 ÷ 3 = 10
	Using an empty number line 'How many groups of five?'
	$\begin{array}{cccccccccccccccccccccccccccccccccccc$

Recall and use multiplication and division facts for the 3,	Mental strategy using partitioning         84 ÷6 = 14       (Partition 84 into 60 + 24, using knowledge)	e of multiples of 10)
4 and 8 times tables	60 ÷ 6 = 10	, .
	<i>24 ÷ 6 = 4</i>	0
Write and calculate division		0
